

MINIVER

The most efficient manner of joining transmission belts.

Further information and technical details at www.fonmar.com

Workshop press for joining timing and flat transmission belts that allows **continuous working cycles** thanks to the innovative design of its heating elements, achieving a **perfect belt finish** without deformations by means of its peripheral cooling that avoids the sudden change of temperature between the splice area and the outside during the vulcanizing process.

Its **bi-manual lifting system** offers added safety for the integrity of the operator.

Its interchangeable molds, specific for each pitch and type, make it possible to **join all belts available on the market**.

MAIN FEATURES:

- Very fast cycles that facilitate continuous operation.
- Water cooling.
- Maximum safety for the operator.
- Spliced belts without deformation, thanks to lateral cooling.
- Reduced perimeter belt splicing.
- Automatic process.
- Interchangeable molds.
- Working support (optional).
- Available for belt widths from 75 mm to 520 mm.

Control panel.

Interchangeable molds.

Peripheral cooling.

Working support (optional).
