

Portable press for the vulcanization of fabric and steel cord rubber belts, which allows expandable splices thanks to its groupable design. Each 260 mm long module is autonomous as it incorporates a pneumatic pressure, heating and water cooling system.

Up to 12 bar of pressure, with airbags in the upper and lower frames, achieves uniform pressure along the length of the platen for optimum splicing results, minimizing stress on the chassis.

The elements are assembled together allowing quick installation and mounting on uneven and sloping surfaces.

For further information & technical data, visit www.fonmar.com

MAIN FEATURES:

- Excellent joint quality provided by its double airbag.
- For jobs requiring up to 12 bar pressure.
- Belt width up to 2000mm
- Quick assembly thanks to its modular design.
- Can be grouped together to achieve the required splice length.

260mm autonomous elements.

Top and bottom pressure bag.

Can be grouped till the required joint length is achieved.

Light and comfortable press to work in any environment.
